

# SENG5802: Software Engineering II - Software Design

## Design Patterns II

# Outline

- 1 Design Context
- 2 Architecture and Design
- 3 Patterns
  - Bridge
  - Abstract Factory

# What is design? (1/2)

A creative activity

Not an “industrial” activity

Is it engineering at all?

# What is design? (2/2)

But, what is engineering then?

Design requires a few essential elements.

- Understanding
- Background
- Ideas
- Freedom
- Tools
- Judgment

# Design Inspiration

You need ideas

Where do they come from?

- Preparing our mind
- Chance

# Lateral Thinking

- Randomness
- Provocation
- Challenge
- Concept fan
- Disproving

Edward de Bono, 1967

# Outline

- 1 Design Context
- 2 Architecture and Design
- 3 Patterns
  - Bridge
  - Abstract Factory

# Design Context

S & T recommend starting with elements of design which establish context

What is the context of design?

# Module dependencies

- Afferent coupling ( $C_a$ ): number of other modules that **depend on the module** somehow
- Efferent coupling ( $C_e$ ): number of other modules that **the module depends on** somehow
- Instability ( $I = \frac{C_e}{C_a + C_e}$ ): resilience to change
  - Abstractness: proportion of abstract elements in a module “Software package metrics” Robert Martin

# Managing coupling

Keep dependencies under control

Prefer delegation over inheritance

Avoid circular dependencies

Many ways to break or invert dependencies

# Improving cohesion

Are switch statements evil?

When, exactly, are they a sign of poor cohesion?

# Outline

- 1 Design Context
- 2 Architecture and Design
- 3 Patterns**
  - Bridge
  - Abstract Factory

# Outline

- 1 Design Context
- 2 Architecture and Design
- 3 Patterns
  - Bridge
  - Abstract Factory

# Bridge

GOF – *Decouple an abstraction from its implementation so the two can vary independently*

Solves common cases of “powerset” subtypes that arise from two orthogonal sources of variability

# Outline

- 1 Design Context
- 2 Architecture and Design
- 3 Patterns
  - Bridge
  - Abstract Factory

# Abstract Factory

GOF – *provide an interface for creating families of related or dependent objects without specifying their concrete classes*

Consider the SalesOrder scenario

# Creating a SaleOrder
