Test Plan/Case Revisions for 1.1

Moti Begna, Kalven Schraut, Rohit Bagda

Test Plan Changes

- Specifically called out only needing Java 8 JRE
- Reduced scope of testing environments
- Added an additional exit criteria for generating a test/defect report
- Added test case development effort as an entry criteria

Test Case Changes

- Test case 31 was changed to correctly rank golfers. The order of the rankings should be reversed since having a higher score (not stroke count) means you ranked higher.
- Test case 11 was a duplicate of test case 10 so was removed. The Ids for all other test cases stayed the same
- Column length for Requirement 3-E was updated to 48 to ensure scores for all 18 holes are captured for the golfer's scores in the input file.
- Added version number information to 1-E in the requirements matrix.
- Added requirement for Java version to 9-A
- Added test case id 0 to test requirement 9-A
- Added requirement for performance to 9-B and mention how it will be tested
- Added column in requirement matrix for relevant associated test cases in order to help with forward traceability
- Added test id 32 to test requirement 2-D
